## ALL ABOUT PALUDARIUM

### HOW TO MAKE YOUR OWN PALUDARIUM

#### >>> READ MORE

Now that you already determined the ideal location and dimensions of your tank, it is time to think about your planted aquarium style. In this article, we will be discussing the different aquascaping designs to unleash the inner artist in you, specifically the Paludarium designs and Paludarium ideas that you can apply in your scape.

#### READ MORE <<<

Aquascaping is the art of arranging aquatic plants, driftwood, rocks, stones, and even the substrate in an aesthetically pleasing and natural manner. You probably searched on the internet and was overwhelmed by tons of aquascaping images and still cannot decide. So in this article: the main characteristics, what tank to use, light, substrate, if you need CO2, what filter, fertilizer, hardscape, what fish and plants will be discussed to help you in your decisions.

### KNOW ABOUT AQUASCAPING

# WINTER VEGETABLE GARDENING

## 5 AWESOME TIPS

By Olivia Wilson

### >>> WHAT TANK TO USE?

You can use conventional tanks for a Paludarium set-up that has open-fronts (for easy aquascaping and landscaping) in many different sizes like the pic below. These tanks are open halfway (some even lower) at the front then diagonally meets the tank's height towards the rear

You can also use standard open aquariums for your amphibians and reptiles, and some aquariums have covered tops that you can open and close when needed

### >>> WHAT LIGHT TO USE?

Lighting is not too critical if you are using undemanding plants. Even a simple clip-on LED light will do. If your Paludarium is outside the house, in the terrace, for example, but shaded. Even the ambient light from the sun is enough! I still strongly recommend that you use a dimmer so you can adjust the intensity of your light lower once unpleasant algae started to show up in your Paludarium setup.

### EXPERT ADVICE

The amount of your hardscapes depend on the size of your tank. You need rocks and driftwood and these can be source from Mother Nature or can be purchased. I suggest you take a vacation first and bring home some hardscapes so you can save money.

### >>> WHAT SUBSTRATE?

You don't need a substrate if you are using epiphyte plants. But you can still use inert sand, coarse gravel, small rocks, or crushed lava rocks at the bottom of the submerged part of your Paludarium for aesthetical purposes. You can tie or stick your epiphyte plants in rocks and You can also use regular organic garden soil for your terrestrial plants (non-epiphyte ones). However, it would be best to plan how to divide or isolate the soil part to the water because the soil may cloud the water. Or you can just use Aquasoil to save you from all the troubles. driftwood.
